Potential competing interests: No potential competing interests to declare.

The research content of this article is quite interesting and the research method is appropriate, but the citation time is too long and the conclusion points are not clear. Specifically, there are the following suggestions that need improvement.

Abstract: Reducing the description of indicators should mainly indicate the key points of the research results.

Introduction and literature review: These two parts should be reorganized, and the content of the introduction should be adjusted to the literature review.

Method: It is recommended to add a research concept design diagram. The data analysis lacks specific instructions on the total sample size and the collected questionnaire.

Result: The data description of the sample should be adjusted to the questionnaire section of the method. It is recommended to modify the scrolling view method of Table 5 to a complete table to view the complete comparison content.

Discussion: Limitations do not indicate the specificity of the sample selection region.

Conclusion: It is recommended to draw main conclusions and prospects hierarchically.

In addition, the survey questionnaire is recommended to be added as supporting materials in the attachment section or uploaded to Figshare.
