RXRB wt Allele

National Cancer Institute

Source

National Cancer Institute. *RXRB wt Allele*. NCI Thesaurus. Code C51715.

Human RXRB wild-type allele is located in the vicinity of 6p21.3 and is approximately 7 kb in length. This allele, which encodes retinoic acid receptor RXR-beta protein, is involved in the mediation of DNA binding and transcriptional regulation pertaining to processes involving the effects of retinoic acid.
