**Potential competing interests:** No potential competing interests to declare.

I would like to congratulate the author for this effort. Here are some development proposals:

I hope to expand on the literature review that identifies the relationship between augmented reality (AR) technology and both student engagement and learning outcomes.

Include more details about the sample selection process.

Consider incorporating additional quantitative metrics, beyond ratings, such as metrics that evaluate user engagement.

I collect some qualitative observations from the control group, to facilitate comparative analysis.

I hope to evaluate and compare the results obtained from surveys and interviews to draw coherent conclusions.

What are the limitations associated with the study design?

Talk about the procedures used to collect and analyze data.
