Potential competing interests: No potential competing interests to declare.

The article reinstates the role of stereotactic body radiotherapy and its key role as a conformal external beam radiotherapy especially in cases of Recurrent H&N malignancies. The article highlights the importance of fractionated radiotherapy to minimize toxicity and increase survival. Every national should develop their consensus guidelines for SBRT characterized to their population traits of H& N malignancies. The article can also give a brief view on statistics of dose ranges and toxicities from the current studies in India to highlight the shortcomings which will be a strong rationale for a prospective study and development of guidelines.
