## Comment on:

Uptake of  $^{15}\text{N}$ -urea and phosphates in *Triticum aestivum* with *Pseudomonas putida* and *Rhizophagus irregularis* endophytes of calcareous soil weeds

1. In this experiment, compare G1 and G2 efficiency to see which one is best to combine with *Pseudomonas putida* in terms of N induction to stem and/or grain. The information should then be included in the conclusion and abstract.
2. Which type of phytohormone is mentioned in the conclusion and abstract? Please provide specifics about the measurement, result, and discussion.
3. Other than that, please double-check your style and English, such as "italic,  $\times$ ,  $x^2$ ," and so on.
