Thyroid Gland Spindle Cell Tumor with Thymus-Like Differentiation

National Cancer Institute

Source

National Cancer Institute. *Thyroid Gland Spindle Cell Tumor with Thymus-Like Differentiation*. NCI Thesaurus. Code C46105.

A rare, slow growing, primary malignant tumor of the thyroid gland characterized by a lobulated architectural pattern and the presence of a biphasic cellular population composed of spindle epithelial cells and glandular cells. A small number of cases are composed exclusively of spindle epithelial cells or glandular cells.
