Hereditary persistence of alpha-fetoprotein

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Hereditary persistence of alpha-fetoprotein. ORPHA:168615*

Hereditary persistence of alpha-fetoprotein is a benign genetic condition characterized by persistence of high alpha-fetoprotein (AFP) levels throughout life, with no associated clinical disability and thus no need for specific therapy
