Potential competing interests: The author(s) declared that no potential competing interests exist.

This work opens a very nice reflection on accessible science, which is gradually being adopted as a criterion for paper submissions by many top conferences. The inclusion of digital posters in this discussion also opens perspectives towards the newer formats of scientific communications that have gained popularity during the covid pandemic.

I would be excited to see the follow-up of this work, with more in-depth discussions that interact with the wealth of existing research in low-vision reading and media design.
