Review of: "A Unified Framework for Cyber Oriented Digital Engineering using Integration of Explainable Chaotic Cryptology on Pervasive Systems"

Hakim El Fadili[1]

1 Université Sidi Mohammed Ben Abdellah

Good paper (writing, methodology, state of the art, illustrations, comparison).

The overall vision on the subject is also good.

You must just enhance the following points:

1- Add references in sections 4 and 5 (at least): when you speak about a specific chaotic map and its advantages/disadvantages, you must add the corresponding references in the literature.

2- Tables 1, 2, and 3 must be included in your text and explained.

3- Same thing for Figure 5.

Else, I find that the article is good and publishable after these small modifications. The more references you have for your statements, the more scientifically correct your work is, so don't forget to reference each time you give scientific truths.
