Potential competing interests: No potential competing interests to declare.

In the Abstract, I understand that the reference "the strongest drug safety warnings" (line 3) refers to medicines with greater potential to cause more serious undesirable effects. Therefore, I propose replacing the term "strongest" with another more aligned with the idea "medicines with greater potential to cause more serious undesirable effects". As for Keywords, I did not find the descriptors (keywords) Black Box Warning, Gap, Logo, and Drug Pack in DeCS/MeSH. Furthermore, I understand that the proposal presented by the authors includes not only biological drugs, but all medications that have greater potential to cause more serious undesirable effects. Therefore, I propose as a set of descriptors (keywords) Drug Labeling, Prescriptions, Electronic Health Records, Awareness, FDA, and Patient Safety. I think that these descriptors (keywords), as a whole, are more effective in contemplating the main idea of the manuscript.
