Potential competing interests: No potential competing interests to declare.

This article examines drinking water quality in the source, storage, consumer taps, and home storage. Although, for review, the article file should be made available to the reviewer in a complementary form, including tables and figures, so that constructive and better comments can enrich it. Unfortunately, this article did not provide tables and figures. However, after the study and evaluation, the mentioned article can be prepared for publication after the following amendments:

- Linguistic problems are visible in the article. It is better to check and make corrections by some native speakers before publishing the article.
- Equations and formulas should be written in correct and mathematical form, and their components should be explained in detail.
- Symbols and formulas should be written correctly and according to accepted scientific standards.
- In-text citation and referencing should be considered in a standard way and in appropriate places.
- Tables and figures should be added.
