Greetings to All

The evaluation of the manuscript according to the recommendations of the first stage is as follows:

Article title:

Study of environment-behavior in three types of the urban context of Tehran — Comparative analysis of the Chizar, Narmak, and Khazane neighborhoods' context using survey and space syntax methods

According to the recommendations of the peer reviewers to the respected researchers, the corrections that have been made, especially in referencing, have been done well and are acceptable.

Since the manuscript pursues very good goals and its main text has a proper structure and substructure, but the abstract and conclusion are moderately expressed, it is necessary to improve these two important parts.

For example, in the conclusion section, the word (Eventually) is repeated three times. This kind of repetition reduces the quality of the manuscript.

Respected authors are advised to manage the abstract (ground and purpose to conclusion) and conclusion (selection of key and solvable points in the results and discussion and suggestion section) in a structured manner for more global appeal.

By structuring these two sections to make them more attractive, this article is very purposefully publishable.

According to the opinion of the journal team (score 1-5), the manuscript has a score of 4.

Reducing weaknesses and threats in a research manuscript is an opportunity. Finally, I wish all the best to the dear writers.

"Best Regards"

Seyyed Akbar Sadaty, PhD. (PR). (COPDSIRAN)
