Review of: "Synthetic glycans that control gut microbiome structure mitigate colitis in mice"

SHIGUO CHEN

Potential competing interests: The author(s) declared that no potential competing interests exist.

The sight of the article is quite interesting. However, the structure feature of the glycan is poorly described, especially the authors provides more than 800 SG glans, can the authors provides a basic summary of these detailed structures, which is quite important of the final conclusion. Some of the NMR spectrum are in low resolution, a mass spectra will be greatly helps.
