

Review of: "SARS-CoV-2 Infection and Blood Group Associations in the United Arab Emirates"

Amira S.A. Said¹

¹ Al Ain University of Science and Technology, Abu Dhabi, United Arab Emirates

Potential competing interests: No potential competing interests to declare.

The introduction part: needs to include more information about the scientific background of why Blood group A has more susceptibility to COVID-19 infections.

Rewrite the objective of the study to match your aim, which is assessing the correlation between blood groups and susceptibility to COVID-19 infections.

The method part: Needs to include more comprehensive details about the sampling method and sample size selection. Elaborate on how participants were selected and recruited. Was the sample representative of the general population, or was there any bias in data selection?

The results part: Needs to include a table of the demographic details of all participants.

The study needs to elaborate on whether the other confounding variables have been controlled, including the effect of patients' age, comorbidity conditions, and socioeconomic factors, and whether they may have affected the susceptibility to COVID-19 infections.

Mentions the limitations of the study and the areas for improvement for further research.
