My comments on the manuscript entitled "Sarcopenia in Coronavirus Disease (COVID-19): All to Know from Basic to Nutritional Interventions from Hospital to Home" are as follows.

1. Abstract should be a summary of the whole manuscript along with limitations and future prospects.
2. The introduction section is generally about your major objectives and approaches utilized in the manuscript which is missing. Elaborate the last paragraph of the same by including above suggestions.
3. Review manuscript is not merely a summary of collection and citations of literatures. Authors input are the very significant part in your manuscript. Write the same at the end of each paragraph.
4. A well designed signalling figure as per your manuscript content will be needed. This will enhance the quality of your manuscript. Given figures are very superficial.
6. Please cite relevant PMID: 36092161 and PMID: 33091590 regarding COVID-19 in your manuscript.
7. Write a separate discussion section of around 1000 word just above the conclusion section.
7. Complete editorial checking will be needed for your manuscript.
