National Cancer Institute. *OSA*. NCI Thesaurus. Code C19862.

The *Drosophila* gene *osa* encodes a putative DNA binding protein that contains an AT-rich interaction domain (ARID). It interacts genetically with Antp, ro, brm, Pc, Scr, and several other genes. Similar sequences have been identified in *Caenorhabditis elegans*, *Homo sapiens*, *Mus musculus*, and *Saccharomyces cerevisiae*. (from FlyBase 0003013 and NCI)
