Potential competing interests: No potential competing interests to declare.

My additional comments are

1. It's important to highlights the objectives and research questions clearly in the introduction
2. Explanation is needed on the concept and past study on every related on digital skills in the literature review section:
basic computer skills, internet skills, technical skills and collaborative skills influence the teaching and learning
3. it's a need to add past study on digital infrastructure, availability of internet, professional development, electricity, technical support, readiness, awareness, overcrowded classrooms and socio-economic conditions
4. Explain the relationship between theoretical framing and the factor on digital skills.
5. The flow of research design needs to be elaborated in detail regarding exploratory sequential. How the qualitative result determined the quantitative phase as a follow up?The triangulation phase was not clear.
