I am pleased to review the manuscript: Efficient Management of Information Communication Technology Resources in an Organization.

The authors have done well in structuring their study. Overall, the sections are elaborately written. Hence, I believe that this study can be considered for publication provided the authors are ready to revise their manuscript as per the minor comments provided below:

- The abstract should include a brief background of the study.
- They should add a signposting keyword.
- The study should provide a separate heading for the research gap in the introduction section.
- It is important to include a separate section for limitations in the paper's conclusion section.
- Please proofread the manuscript before submitting the revision.

Finally, I recommend accepting this manuscript with minor revisions.
