Gestational trophoblastic neoplasm

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base*. [Gestational trophoblastic neoplasm](#). ORPHA:59305

Gestational trophoblastic tumors (GTT) are malignant forms of gestational trophoblastic disease. The tumor always follows pregnancy, most often molar pregnancy (hydatidiform mole; see this term). Four histological subtypes have been described: invasive mole, gestational choriocarcinoma, placental site trophoblastic tumor and epithelioid trophoblastic tumor (see these terms).
