**Potential competing interests:** No potential competing interests to declare.

- The article do not have a clear problem statement
- The paper lacks scientific relevance
- The introduction only has one reference of which it is not convincing enough for a scientific paper
- The literature cannot be made up of only 11 references, there is plenty of studies that can make up the literature of this paper
- The discussion of the literature is poor constructed in which it lacks the following: topic and country where the study was conducted, time span in which the study focused, nature of data used, variables and results, recommendation for future studies
- Section 3, the author just discusses the models and does not go into detail as to how applicable or how the models they discuss cannot be used for the study
- Conclusion lacks the impact of what the study is all about
- the study lacks novelty
