Natural products in eatable composites as a source for opposite against COVID-19 was a very effective step in this article because excellent diet is the helpful medication. Despite the fact that we see the article shortfall to any experimental plane, therefore I propose to the author to strengthen his article with more evidence about the phenolic compounds in tea and pomegranate. The author concluded the compounds that may effect on SARS-CoV-2 3C like protease he can do molecular docking review to show theoretically the ability for each of these phenolic compounds to bind with SARS-CoV-2 3C like protease and inhibit it.
