Potential competing interests: No potential competing interests to declare.

Let's test whether the average scores of each scale used in the research show a normal distribution. Average scores for each question are given in Table 1, standard deviations are very high. Let's analyze whether it shows a normal distribution. "Combined effect of the extracted factors on health and safety program (ANOVA)" is not understood in table 4.6. Group mean and standard deviation values should be given. The analyzes should be written in the statistics section.
