

Review of: "Exploring the Factors of Using Cloud Service in Malaysia Higher Education Institutions During COVID-19 Pandemic Outbreak"

Saeed Ahmed Raheem¹

¹ Altinbas University

Potential competing interests: No potential competing interests to declare.

The PDF file does not explicitly mention specific weaknesses or limitations of the study. However, based on common research critique criteria, potential weaknesses could include:

A- Sample Size and Generalizability: The study may have a limited sample size, potentially affecting the generalizability of the findings to a broader population beyond Malaysian higher education institutions.

B- Research Design: The study appears to be cross-sectional, which may limit the ability to establish causal relationships or track changes over time. Longitudinal studies could provide more robust insights into the adoption of cloud services in education.

C- Measurement Validity: The measurement tools used to assess constructs like perceived usefulness and social influence may not have been validated specifically for the context of cloud service adoption in Malaysian higher education institutions.

D- Data Collection: The reliance on self-reported data through questionnaires may introduce response bias or social desirability bias, impacting the accuracy of the results.

E- External Factors: The study may not have accounted for external factors such as technological infrastructure, institutional policies, or socio-economic backgrounds that could influence students' adoption of cloud services.

F- Recommendations for Future Research: While the study suggests areas for future research, it could have provided more specific and actionable recommendations for addressing the identified limitations and building on the current findings. It is important to note that these points are speculative based on common research critique standards and the information provided in the PDF file. Conducting a thorough review of the study's methodology, data analysis, and results would be necessary to identify specific weaknesses accurately.

Thank you
