The topic of research is interesting and presently very actual, chosen examples are proper and relevant. However, paper has some technical and contextual drawbacks. Considering paper structure, chapters 6, 7 and 8 should be rewritten. Namely, in chapter 6. Analysis authors should explain how and based on what findings they created Table 6.1, the chapter 7. Findings must be elaborated in details. I find that table in chapter 8. (no numeration!) should be located in chapter 7., explained way towards given observations, discuss observations and factors which lead to the recommendations in chapter 8. Usually, facts from used literature are signed (quoted) in the text, because, how is written reader does not know how and where referenced papers are used. Therefore, before publication this paper should be improved.
