**Potential competing interests:** No potential competing interests to declare.

The authors have evaluated the potential of palm oil waste for mushroom and biogas production. The findings are interesting and useful. However some revisions are suggested to improve the manuscript which are advised below;

1. Add some more numerical data of results in abstract
2. Add novelty statement in the manuscript before objectives of the study
3. Please statistically analyze the data
4. Add information about how much palm oil waste is available in the country and how much oyster and biogas can be generated
5. Also add information about global perspective of the related study
6. Please add more logics and latest literature in the discussion section
7. Concise the conclusion by removing background, methodology. There should be important findings and future perspective
8. Remove typo and grammatical mistakes
