

Review of: "Six Months of Remote Patient Monitoring is Associated with Blood Pressure Reduction in Hypertensive Patients: An Uncontrolled, Observational Study"

Fernando Stuardo Wyss Quintana

Potential competing interests: No potential competing interests to declare.

Although the decision to evaluate only the MAP could be questionable, the fact that it is an indirect marker of prognosis makes it viable, I would love to know the values of systolic and diastolic pressures, to understand what the real impact is, since the reduction of MAP, it could still reflect some values higher than expected, few patients in general, the methodology is good and I think it greatly opens the possibility of using well-developed platforms and opens a door to the future with the devices that are to come
