Potential competing interests: No potential competing interests to declare.

The manuscript is well presented but the following are suggested to improve the quality for publication.

1. The title of the study needs modification
2. The introduction section needs to be summarized.
3. By what percentage does global water demand increase per 20 years? Please, quote the source.
4. What are the possible sources of pollution of the groundwater in the study area?

The manuscript is good for publication in the journal; hence, I recommend its publication after the minor corrections area made.
