In my point of view, this mini-review is well written generally; however, there are several improvements I would like to suggest:

1. Although the title is about the role of mango in the immune system, for me, such relevant information is not extensive enough to fit the title (only one section).
2. The general nutritional facts were also included in this review, but hardly relevant to the regulation of the immune system.
3. The information about how bioactive compounds in mango modulate the immune system is not detailed and specific enough.

Thank you.
