Potential competing interests: No potential competing interests to declare.

I have revised the article "Drought Risk in the Mahanadi River Basin: A Multidimensional Approach for Integrated Urban-Rural Drought Management Strategies." I have found the idea of the research is good, but it still needs to improve the article.

- 1. Need to revise the highlights.
- 2. The authors need to add some latest references in the alternative ranking and standardization criteria layer section, results and discussions sections, and the Validation of Drought Risk Assessment section as well.
- 3. Discussion needs to be concise and clear.
- 4. The English needs to improve throughout the article.
