The manuscript entitled "Investigation and Synthesis of Benzothiazole-Derived Schiff Base Ligand Against Mycobacterium tuberculosis"

is suitable for publication in *Journal of Qeios* after **minor revision**. Please consider the following notes:

1. It would be better to represent the results in the abstract in a more interesting way.
2. I think that 45 references in the introduction is too much; also, the introduction should be rearranged, i.e., the methods and the aim of the work at the end, and displaying the results in the introduction is not preferred.
3. All the figures are not good; they must be drawn to be clearer while the authors are depending on the figures from the device.
