**Potential competing interests:** No potential competing interests to declare.

The paper has an interesting topic that seeks to evaluate the thermal comfort in hospital wards to ensure patient comfort, safety, and climate change sustainability. However, the introduction of the paper seeks to focus on a review article whose objectives do not match with the content in the methodology and results and discussion sessions. This means that it is a bit challenging to understand the originality of the paper.

I would recommend that the authors take time to write an introduction that matches with the other sections of the paper to ensure a good scientific article.
