Potential competing interests: No potential competing interests to declare.

Title Clarity:

The title clearly indicates the focus of the study on improving the quality of plastic pavement materials through analytical methods. It effectively communicates the scope of the research. **Introduction:** The introduction provides a solid overview of the importance of plastic pavement materials and the need for their improvement. However, it could benefit from a more explicit statement of the research objectives and the significance of the study.

Literature Review:

The literature review adequately covers relevant research on plastic pavement materials, but it could be strengthened by incorporating more recent studies and discussing any gaps or inconsistencies in the existing literature.

Methodology:

The methodology section provides a clear explanation of the analytical techniques used in the study. However, more details regarding the specific procedures and equipment involved would enhance the reproducibility of the research.

Results and Discussion:

The results presented in the study are comprehensive and well-organized. However, the discussion could delve deeper into the implications of the findings and how they contribute to the overall goal of improving plastic pavement material quality.

Conclusion:

The conclusion effectively summarizes the key findings of the study and their implications. It would be helpful to include recommendations for future research or practical applications based on the results.
