Potential competing interests: No potential competing interests to declare.

The article describes an interesting and detailed practical achievement. However, the authors are invited to address the following points:

- The device is not placed in its context; it would be useful to specify how this device adds value.
- The work is based on a very old article. Technology has evolved significantly since then. Moreover, no comparison with devices developed elsewhere is presented. The authors are encouraged to update the bibliography and conduct benchmarking.
- Very few results are presented, making it difficult to identify the quality of the device.
- Finally, there is a lack of critical analysis of the results obtained at the end of the communication. How is the device performing? What problems were encountered? What are the future prospects?
