Avibacterium paragallinarum

National Cancer Institute

Source

National Cancer Institute. *Avibacterium paragallinarum*. NCI Thesaurus. Code C86158.

A species of facultatively anaerobic, Gram negative, coccobacilli shaped bacteria assigned to the phylum Proteobacteria. This species is catalase negative and produces acid from D-mannitol and D-sorbitol. *A. paragallinarum* is pathogenic in birds causing upper respiratory infections such as infectious coryza.
