Potential competing interests: No potential competing interests to declare.

I would like to say that researching and revealing distance education models in medical education during the pandemic period and wanting to know the existence of different methods is a very important research aim. The aim is good, but the research process is very weak. First of all, I could not see some information in the article, such as how many articles were examined in the method section, how many were evaluated, and on what basis the method classifications were made. In the method section, a workflow could be presented in the form of a chart or model. When I read the article, I wanted to find out which methods are more commonly used. I wanted to see in this article whether the usefulness of distance education models has been evaluated or not. I wish you good work
