Pack of cigarettes

Addiction Ontology

Source

Addiction Ontology

Definition: A combustible tobacco-containing product that is manufactured as two or more cigarettes in a single container.

Informal definition: A container manufactured to contain two or more cigarettes.

Comment: The entity in this case is the pack plus cigarettes manufactured within it. Cigarettes are 'part of' the pack rather than contained within it because the pack is both the packaging and the cigarettes.

Curator note: It is important to state that it is manufactured as containing two or more cigarettes because the number actually in the pack depends on how many have been used. It is also important to be clear that it includes the cigarettes and not just the pack. A different term (cigarette pack) has to be used for the container. For AddictO the parent of interest relates to tobacco rather than more general types of pack.

This definition was imported from the Addiction Ontology (see <https://addictovocab.org/>). Comments and suggestions for improvements are welcome using the Qeios review system.

Definitions imported from the Addiction Ontology (AddictO) are what are known as 'ontological definitions'. See this article in Qeios for an explanation <https://www.qeios.com/read/YGIF9B>.

Ontological definitions can sometimes be hard to read. In those cases we also include an informal definition.

Definitions also often require elaboration to make it clear how they should be used and what they include. In those cases we include a comment.

Also, definitions sometimes require an explanation as to how they came about to help users understand how they relate to alternative definitions. In those cases we include a curator note.
