The authors show the results of a systematic review and meta-analysis regarding the efficacy of CuNP in viral skin infections.

I suggest to enrich the first section of the introduction (1), adding more details about viral skin infections (1.1) and an overview of the possible treatments (1.2). I also suggest to add a short subsection in the second section (2) that highlights the possible ways of synthesis of the CuNPs.

I would enrich the section regarding the comparison with other antiviral therapies and I strongly suggest to add some evidence in the results of the meta-analysis, including numbers and references.
