

Review of: "The Role of Platelet Rich Plasma Injections in Cases of Stress Incontinence"

Carlos Delgado-Miguel

Potential competing interests: The author(s) declared that no potential competing interests exist.

The paper is interesting, being a prospective study. However, the absence of a control group and the lack of randomisation undermine the credibility of the results, as well as the low sample size of 20 patients.

We recommend that a control group be included in the study and that the number of patients included in the study be expanded.
