This literature review gives a modest overview of the issues in mosquito control. In my opinion, the 'one health' framework adds little to the existing literature on Integrated Vector Control. I was disappointed that it gave little data on the existing mosquito control in Indonesia, instead of just stating that it hasn't achieved maximum results (that is not surprising). I'd have preferred to see more data included on the mosquito control situation specifically in Indonesia; however, this article could be about any other tropical country. On the positive side, this is competently written in clear English and gives an overview of the strategies that can be considered for mosquito control.
