**Potential competing interests:** No potential competing interests to declare.

This report presents an interesting overview of specific advancements in nanocarriers for protein and peptide drug delivery. It is a valuable contribution to the cited area of research.

Some few aspects need to be covered in order to improve the scientific quality of this manuscript / minireview.

There are some limitations in using nanocarriers for protein and peptide drug delivery; authors need to emphasize them.

Conclusions are very nicely described by authors; one enjoys reading them. In addition to the summary provided by authors, it would be very useful that brief descriptions were included indicating in a very specific way where to go from here, where to go using research works and developments based on the present state of the art of the present topic in order to find some solutions to present challenges of the present topic.
