Source

National Institute of Neurological Disorders and Stroke (NINDS). [Schilder's Disease Information Page](#).

Schilder's disease is a rare progressive demyelinating disorder which usually begins in childhood. Schilder's disease is not the same as Addison-Schilder disease (adrenoleukodystrophy). Symptoms may include dementia, aphasia, seizures, personality changes, poor attention, tremors, balance instability, incontinence, muscle weakness, headache, vomiting, and vision and speech impairment. The disorder is a variant of multiple sclerosis.
