Commentary on HTP written so well and comparatively informative. Here are some suggestions for improving the article.

1. Ensure that comparisons between HTPs and traditional cigarettes are clear and based on typical usage rather than a tobacco-weight basis. This will help readers understand the relative risks more accurately. 2. Include a more detailed discussion of the potential oral and lung effects of aerosols compared to smoke. 3. The conclusion should directly reflect the discussions and findings presented in the main body of the article. Avoid introducing new data points in the conclusion that were not thoroughly discussed earlier.
