# Attend to discrepancy between current behaviour and goal BCT

Behaviour Change Intervention Ontology (BCIO)

## Source

*Behaviour Change Intervention Ontology (BCIO)*

**Definition:** A that draws attention to discrepancies between a person's current behaviour and the person's outcome goal, behavioural goal or action plan.

**Comment:** If discomfort is created only code 'draw attention to incompatible beliefs BCT' and not this class. If goals are modified, also code 'review behaviour goal BCT' and/or 'review outcome goal BCT'; if feedback provided, also code 'provide feedback BCT' or one of its child classes.

*This definition was imported from the Behaviour Change Intervention Ontology (see <https://bciosearch.org/>). Comments and suggestions for improvements are welcome using the Qeios review system.*

*Definitions imported from the Behaviour Change Intervention Ontology (BCIO) are what are known as 'ontological definitions'. See this article in Qeios for an explanation <https://www.qeios.com/read/YGIF9B>.*

*Ontological definitions can sometimes be hard to read. In those cases we also include an informal definition.*

*Definitions also often require elaboration to make it clear how they should be used and what they include. In those cases we include a comment.*

*Also, definitions sometimes require an explanation as to how they came about to help users understand how they relate to alternative definitions. In those cases we include a curator note.*
