# Salivary Gland Secretory Carcinoma

National Cancer Institute

## Source

National Cancer Institute. *Salivary Gland Secretory Carcinoma*. NCI Thesaurus. Code C123384.

A rare, low-grade carcinoma of the salivary gland with favorable clinical outcome. It usually arises from the parotid gland and less often from the minor salivary glands. It shares the same histopathologic features and molecular characteristics (ETV6 gene rearrangement) with secretory breast carcinoma.
