The article "Policy-based water management challenges at the local level under non-traditional security perspectives: the case of Hanoi City, Vietnam", is a comprehensive work showing the importance, risks and impact on water policy management, showing a complete evaluation with WSM system. In addition, it represents an innovative research comparing local policies with non-traditional security.

I would only have one comment, on page 12 when referring to NTS and WS state, in the initial paragraph "mathematical relationship between S1, S1, and S3..." S2 is missing?. Otherwise very good work, congratulations.
