Potential competing interests: No potential competing interests to declare.

Dear ladies and gentlemen,

Belonging to the article, I would like to comment:

Introduction:

The motivation could be named better. To do research only because nobody else did it before is not enough. A technical motivation would be good.

Chapter 2.1

Diameter of the fibre?

2.2.

What does EFNARC mean?

Table 2: Please use accurate titles for fresh and hardened concrete.

Compressive strength is an average value of three individual values?

Also, splitting tensile strength?

Deviations from the mean value?

Chapter 3

In section 2-8, there is no information about the reason or a try to explain the results. That is no discussion. The main part of a research work is to find ideas or answers to the results, explanations. I miss that here.
