Potential competing interests: No potential competing interests to declare.

The study does not define the terms "nation" and "state" in the context of Nigeria. This is important because the two terms can have different meanings in different contexts. For example, a "nation" can be defined as a group of people who share a common culture, language, and history, while a "state" can be defined as a political entity with a defined territory and government. In the context of Nigeria, these two terms are often used interchangeably, but it is important to understand the distinction between them.

The study does not provide any specific examples of how nation and state institutions have shaped Nigeria's economy. It is important to provide concrete examples to support the claims made in the paragraph. For example, the paragraph could discuss how the Nigerian government's policies have promoted economic growth or how the judiciary has protected property rights.

The study does not discuss the challenges facing nation and state institutions in Nigeria. It is important to acknowledge the challenges that these institutions face, such as corruption, inefficiency, and a lack of resources. By discussing these challenges, the paragraph can provide a more nuanced understanding of the role of nation and state institutions in Nigeria's economy.

The study does not provide a clear definition of economic growth, stability, and development. These are important concepts to define, as they are the focus of the paragraph. For example, economic growth can be defined as the sustained increase in the production of goods and services over time, while economic stability can be defined as the ability of an economy to withstand shocks and maintain a healthy level of growth. Economic development can be defined as the process of improving the quality of life for all members of a society.

The study does not discuss the role of national and state institutions in promoting economic growth, stability, and development in a comprehensive manner. It only provides a brief overview of the role of a few selected institutions, such as public libraries, higher education institutions, public enterprises, the Nigerian Stock Exchange, and the Nigerian National Petroleum Corporation. However, there are many other national and state institutions that play a role in promoting economic growth, stability, and development in Nigeria. For example, the Central Bank of Nigeria plays a vital role in regulating the financial system and maintaining macroeconomic stability, while the Ministry of Finance plays a key role in developing and implementing economic policies.

The study does not discuss the challenges facing national and state institutions in Nigeria. National and state institutions

in Nigeria face a number of challenges, including corruption, inefficiency, and a lack of resources. These challenges can hinder their ability to promote economic growth, stability, and development.

The study does not provide a clear definition of what constitutes a "national institution" or a "state institution." This is important because the scope of these terms can vary depending on the context. For example, some people might consider the Central Bank of Nigeria to be a national institution, while others might consider it to be a state institution.

It does not discuss the role of private sector institutions in Nigeria's economy. Private sector institutions play a vital role in job creation, economic growth, and innovation. It is therefore important to consider their role in addition to the role of national and state institutions.

It does not discuss the challenges facing national and state institutions in Nigeria. National and state institutions in Nigeria face a number of challenges, including corruption, inefficiency, and a lack of resources. These challenges can hinder their ability to contribute to economic development.

It does not provide any specific examples of how national and state institutions have contributed to Nigeria's economy. It is important to provide concrete examples to support the claims made in the paragraph. For example, the paragraph could discuss how the Nigerian National Petroleum Corporation has generated revenue for the government or how the National Agency for Food and Drug Administration and Control has protected consumer safety.

It does not discuss the implications of the growing role of technology in shaping the relationship between national and state institutions. Technology is transforming the way that governments operate and interact with citizens. It is important to consider how these technological changes are impacting the role of national and state institutions in Nigeria's economy.

You need to add the following literature to strengthen your study. This reference enhances the diversification of the manuscript and can be a future scope of this study.
