CTRC wt Allele

National Cancer Institute

Source

National Cancer Institute. *CTRC wt Allele*. NCI Thesaurus. Code C118558.

Human CTRC wild-type allele is located in the vicinity of 1p36.21 and is approximately 11 kb in length. This allele, which encodes chymotrypsin-C protein, is involved in the proteolytic activation of other serine proteinases. Mutation of the gene is associated with hereditary pancreatitis.
