International Metastatic Renal Cell Carcinoma Database Consortium Criteria

National Cancer Institute

Source

National Cancer Institute. *International Metastatic Renal Cell Carcinoma Database Consortium Criteria*. NCI Thesaurus. Code C155843.

A validated risk prediction tool for patients with metastatic renal cell carcinoma (mRCC) receiving first-line targeted therapy. The model considers: Karnofsky performance status less than 80%, time from diagnosis to first-line targeted therapy less than 1 year, hemoglobin concentration less than lower limit of normal, neutrophil count greater than upper limit of normal, platelet count greater than upper limit of normal, and serum calcium concentration greater than upper limit of normal.
