

Review of: "Internet of Things in Smart Grid: A Comprehensive Review of Opportunities, Trends, and Challenges"

Yijia Liu

Potential competing interests: No potential competing interests to declare.

This review paper highlights the important research work on the application of IoT in smart grids and summarises the current work done. However, the authors do not present a comprehensive set of evaluation metrics to assess the effectiveness of these efforts. As a result, the later paper suffers from illogicality in presenting reasons for the various challenges and opportunities faced by smart grids in the implementation of IoT.
